~~determines~~ adjusts how information is transmitted from one Effector to another

Effector; and

(c) the hardware computing machine including a portion ~~for receiving input~~ running a

Meta program that sets values for one or more parameters of individual Effectors

from the collections of Effectors, the one or more parameters including a time at

which information is transmitted from the individual Effectors to another of the

individual Effectors.

Although not shown above, the telephone interview of December 7, 2007 did not

discuss further (and therefore did not alter) the prior agreement of November 28, 2007, to

also add to the end of claims 5, 14, 61, and 62,

- - wherein the Meta program is a program that determines how to change the Effector

machine's architecture as the Meta program executes. - -

The Examiner wanted to remove the words, such as "configuring" and

"configured" from the claims. The Examiner also wanted to specify the changes that

were being made to clarify antecedents. The Applicant's representative requested, and

the Examiner agreed, to change claims 61 and 62 so that they now read "running a Meta

program that sets values" (instead receiving input from a Meta program or receiving a

Meta program as input), so that the claim reads better.

Although the Applicant's Representative believes the above is an accurate record of the interview summary, it is appreciated that sometimes inadvertent miscommunications occur and sometimes different people have different memories of the same event. Accordingly, if the Examiner notices any omission or misstatement in the above interview summary, the Examiner is invited to contact the Applicant's representative so that the issue may be resolved.

Please feel free to contact the Applicant's undersigned representative at 408-993-1800.

Respectfully Submitted,

David Lewis
